## Plan View

-The B.C.S.F. classification is G3W, resulting in a type 1 management category.

**G** - Caves which contain secondary deposit-type formations of the ordinary type, such, stalactites, flowstone and rimstone dams which are so positioned within the cave that they are quite susceptible to breakage and/or vandalism.

**3** - Crawlways less than 60 centimeters (approximately 24 inches in diameter) and the potential to flood.

**W** - Caves whose characteristics make them moderately attractive to cavers but not to the general public (includes a limited number of interesting features).

-The timber has been left standing (2008) around MemeKave and the surrounding caves. The area around MemeKave was harvested in 2005.

-MemeKave is located in Upper Triassic Qaatsino limestone.
