## Q5/Windy Link Connection Area

### Notes

The survey is a composite of surveys conducted in the 1980s (drawn by Tich Morris for an article in *The Canadian Caver* in 1996), the cave radio location work, and "dive survey" conducted in 2001 ("Sump 1" and beyond) and main passage re-survey in 2003 (line plot). Various components were assembled by a "best fit" by fitting passage outlines to the line plots and the transmit/receive radio position locations (radiating lines from the Q5 sump). The survey through Sump 1 to the bottom of Drummond Falls is low Grade 3, so needs improvement.
